

# Project 1-step1 (set up a server)

- Download atom 文字編輯器
- Study how to write html
- Write a html file (AAA.html) to introduce yourself. Save this file at your project directory.
- Run “python -m http.server” at this project directory. Now your computer is a server.
- Open cmd window. Type “ipconfig” to get your computer’s IP address.(xx.xx.aa.aa)
- Go to a remote PC. And open a web browser. Then <http://xx.xx.aa.aa:8000>
- You can see your AAA.html at this remote PC.

# Project 1-step 2 (get your AAA.html)

- import requests

# Project 1-step 3 (get any html)
