練習 造一個 DataFrame

- Assume you are a data scientist, you have collected the following 6 pieces of data:
  - {'key':'A', 'data':1, 'price':80}
  - {'key':'B', 'data':2, 'price':50}
  - {'key':'C', 'data':3, 'price':90}
  - {'key':'A', 'data':4, 'price':80}
  - {'key':'B', 'data':5, 'price':70}
  - {'key':'C', 'data':6, 'price':70}
- Create a DataFrame:
  - t1=[, , , , ,]
  - import pandas as pd
  - df=pd.DataFrame(t1)
